a dazzling journey into the minds of animals and what they can tell us about our own brains why do dogs say hello but never goodbye what makes baby penguins think the first animal they see is their mother why are bonobos impulsive while chimpanzees show restraint and what does all this tell us about how humans think in the thinking animal nichola raihani takes us on a journey into the minds of other species revealing the extraordinary intelligence at work in the animal world drawing on her expertise as a professor of evolution and behaviour she explores how animals navigate in space and time how they communicate manipulate and collaborate she reveals how they bond with one another and with us and how they are being forced to adapt to a changing world from elephants keeping vigil over their dead to ants using an internal pedometer to map their journeys the inner lives of animals are rich with ingenuity and complexity but just because an animal's behaviour looks familiar doesn't mean it is being driven by the same thoughts or emotions as humans by uncovering these differences the thinking animal challenges us to rethink what intelligence is and how it is shaped by evolution in doing so it offers a fresh perspective on the many thinking animals we share our planet with and the responsibility that comes with understanding them praise for the social instinct surprising thoughtful and endlessly entertaining will storr phenomenally important nichola raihani will change the way we think about ourselves lewis dartnell a superb book about how important cooperation is alice roberts a pleasing juxtaposition of insightful scientific theory with illuminating anecdotes richard dawkins

from the time of locke discussions of personal identity have often ignored the question of our basic metaphysical nature whether we human people are biological organisms spatial or

temporal parts of organisms bundles of perceptions or what have you the result of this neglect has been centuries of wild proposals and clashing intuitions what are we is the first general study of this important question it beings by explaining what the question means and how it differs from others such as questions of personal identity and the mind body problem it then examines in some depth the main possible accounts of our metaphysical nature detailing both their theoretical virtues and the often grave difficulties they face the book does not endorse any particular account of what we are but argues that the matter turns on more general issues in the ontology of material things if composition is universal if any material things whatever make up something bigger then we are temporal parts of organisms if things never compose anything bigger so that there are only mereological simples then we too are simples perhaps the immaterial substances of descartes or else we do not exist at all a view olson takes very seriously the intermediate view that some things compose bigger things and others do not leads almost inevitably to the conclusion that we are organisms so we can discover what we are by working out when composition occurs

as persons we are importantly different from all other creatures in the universe but in what exactly does this difference consist what kinds of entities are we and what makes each of us the same person today that we were yesterday could we survive having all of our memories erased and replaced with false ones what about if our bodies were destroyed and our brains were transplanted into android bodies or if instead our minds were simply uploaded to computers in this engaging and accessible introduction to these important philosophical questions amy kind brings together three different areas of research the nature of personhood theories of personal identity over time and the constitution of self identity surveying the key contemporary theories in the philosophical literature kind analyzes and assesses their strengths and weaknesses as she shows our intuitions on these issues often pull us in different directions making it difficult to develop an adequate general theory throughout her discussion kind seamlessly interweaves a vast array of up to date examples drawn from both real life and popular fiction all of which greatly help to elucidate this central topic in metaphysics a perfect text for readers coming to these issues for the first time persons and personal identity engages with some of the deepest and most important questions about human nature and our place in the world making it a vital resource for students and researchers alike

what are we what is the nature of the human person animalism has a straightforward answer to these long standing philosophical questions we are animals after being ignored for a long time in philosophical discussions of our nature this idea has recently gained considerable support in metaphysics and philosophy of mind it has also amongst philosophers occasioned strong opposition even though it might be said to be the view assumed by much of the scientific community essays on animalism is the first volume to be devoted to this important topic and promises to set the agenda for the next stage in the debate containing mainly new papers as well as two highly important articles that were recently published elsewhere this volume s contributors include both emerging voices in the debate and many of those who have been instrumental in shaping it some of their contributions defend animalism others criticize it still others explore its more general implications the book also contains a substantial introduction by the editors explaining what animalism is identifying leading issues that merit attention and highlighting many of the issues that the contributors have raised
