although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word s first appearance in the language in the mid 1980s in 1973 for instance the uk systematics association held a symposium

on the changing flora and fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier by 1980 the Global 2000 report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies it is increasingly taught and studied in universities and other research institutions around the world addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature biodiversity and conservation is a new title in the Routledge series Critical Concepts in the Environment edited by Richard Liddle of Oxford University's Centre for the Environment this new major work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates
